

# IT'S ALL ABOUT THE ENVIRONMENT

If you are in an environment where you can “fix it” then you probably do not need a **MIDIjet Pro**

However, if you are in an environment where it has to work right the first time, every time, because your fans are listening, then you do need a

**MIDIjet Pro**

You need something that will power through up to 500ft of distance, people, equipment, fans, walls or whatever might come between you and your receiver. You want super-low latency and advanced error checking. You want a transmitter that lasts for up to 30hrs. And you definitely don't want outside interference.

You don't want to worry about *anything* but **giving it all for your fans**
